27HC641

64k-bit CMOS PROM (8k × 8)

DESCRIPTION

The 27HC641 is a CMOS, high-speed UV erasable, electronically programmed Read Only Memory. It is organized as 8192 words of 8 bits and operates from a single 5 volts +/- 10% power supply. All outputs offer 3-State operation and are fully TTL compatible.

The 27HC641 uses advanced CMOS circuitry which allows operation at bipolar PROM speeds while consuming lower power. The highest degree of protection against latch-up is achieved through epitaxial processing, simplifying the design of electronic equipment which is subject to a high noise environment.

The 27HC641 is available in the industry standard 24-pin Dual-In-Line (DIP) package with the same pin out as most 64K bipolar PROMs, thereby making it easier to upgrade systems currently using higher power bipolar PROMs, and allowing the designer to provide a lower power memory system solution. Also available in a standard 32-Pin LLCC.

Ordering codes are listed in the Ordering Information Table.

FEATURES

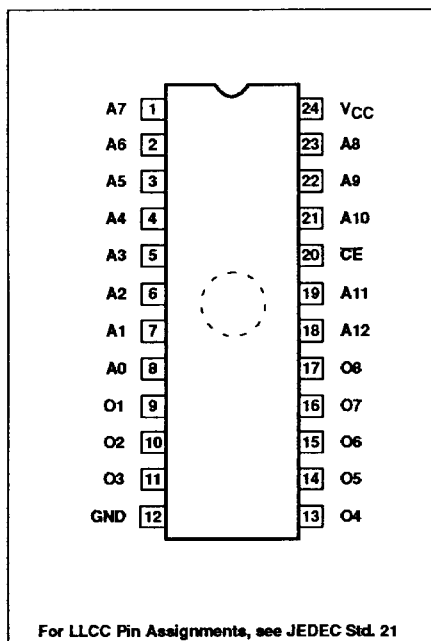

- Address access times 55ns and 70ns
- Max operating ICC of 110mA

- 3-State outputs
- Direct replacement of Bipolar PROMs
- Programmed on industry standard EPROM programmers
- Fully TTL compatible

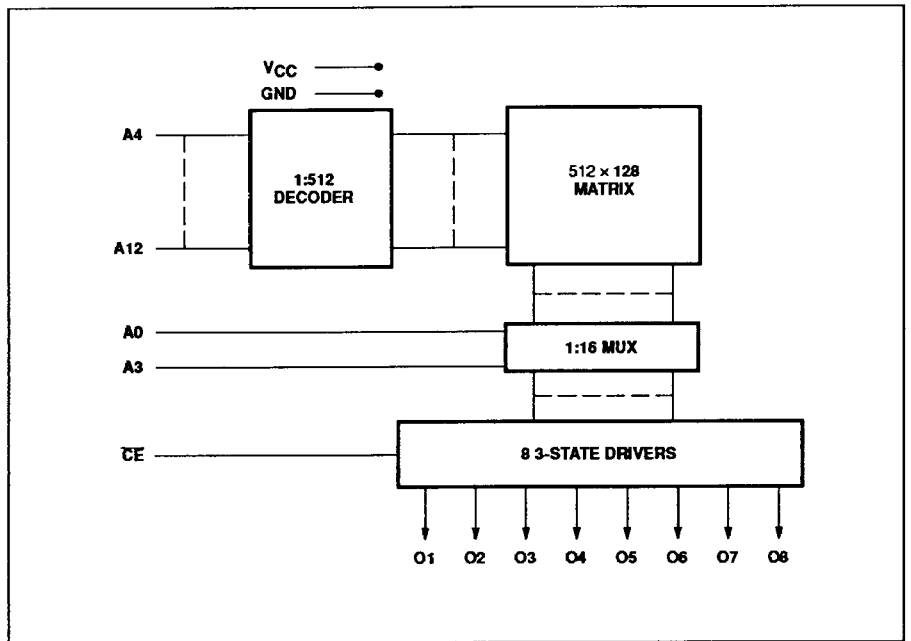

APPLICATIONS

- Prototyping and volume production
- High performance memory systems
- Sequential controllers
- Microprogramming
- Random Logic Replacement

PIN CONFIGURATION

NOTES:

1. Erase characteristics do not apply for one time programming (OT).
2. Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other condition above those indicated in the operation section of this specification is not implied.
3. Minimum DC input voltage is -0.5V during transitions. The inputs may undershoot to -2.0V for periods less than 20ns.
4. C_{IN} and C_{OUT} are measured initially and after any design changes which may affect capacitance.
5. Test conditions ($C_L = 30\text{pF}$, $R_1 = 300\Omega$, and $R_2 = 600\Omega$).
6. Duration of short circuit should not exceed 1 second and short only one output at a time.

EQUIVALENT AC TEST LOAD CIRCUIT**ERASURE CHARACTERISTICS**

The 27HC641 is erased by exposure to ultraviolet light. The recommended erasure procedure is exposure to short-wave ultraviolet light which has a wavelength of 2537 Angstroms (Å). The integrated dose (i.e., UV intensity \times exposure time) for erasure should be a minimum of $15\text{Wsec}/\text{cm}^2$. The erasure time with this dosage is approximately 15 to 20 minutes using an ultraviolet lamp with $12,000\mu\text{W}/\text{cm}^2$ power rating.

The 27HC641 should be placed within one inch of the lamp tubes during erasure. The maximum integrated dose a 27HC641 can be exposed to without damage is $7258\text{Wsec}/\text{cm}^2$ (1 week @ $12000\mu\text{W}/\text{cm}^2$). Exposure of this CMOS EPROM to high-intensity UV light for longer periods may cause permanent damage. Some erasure may occur with exposure to light sources having wavelengths shorter than 4000 (Å) such as sunlight or fluorescent

light. For maximum system reliability, precautions should be taken by placing opaque labels over the quartz window when used in these environments.

PROGRAMMING THE 27HC641

Initially, and after each erasure, all bits of the 27HC641 are in an undefined state. Data is introduced by programming "1"s and "0"s into the desired bit locations. Both "1"s and "0"s must be present in the data word to define each bit. The only way to change a bit to the opposite state is by ultraviolet light erasure and programming it to the desired state.

The 27HC641 is in the programming mode when the Output Enable (\bar{G}) pin is at 12.5V. The data to be programmed is applied 8 bits in parallel to the data output pins. The levels required for the address and data inputs are standard TTL logic levels.

INTELLIGENT IDENTIFIER

The intelligent identifier mode allows the reading out of a binary code from an EPROM that will identify its manufacturer and type. This mode is intended for use by programming equipment for the purpose of automatically matching the device to be programmed with its corresponding programming algorithm. This mode is functional in the $25^\circ\text{C} \pm 5^\circ\text{C}$ ambient temperature range that is required when programming the 27HC641.

To activate this mode, the programming equipment must force 11.5V to 12.5V on address line A_9 (Pin 22) of the 27HC641. Two bytes may then be read from the device outputs by toggling address line A_0 (Pin 8) from

V_{IL} to V_{IH} . The \bar{G} and all other address lines must be held at V_{IL} during interrogation.

The identifier information for Signetics 27HC641 is as follows:

When $A_0 = V_{IL}$
data is "Manufacturer" $15_{[HEX]}$
When $A_0 = V_{IH}$
data is "Product" $21_{[HEX]}$

PROGRAMMING INFORMATION

Complete programming system specifications for the Programming Algorithm are available upon request from Signetics Memory Marketing.

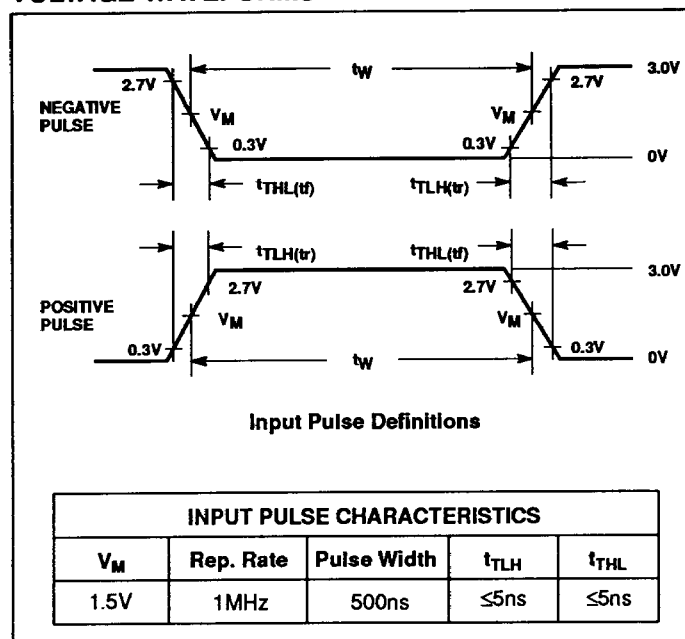

Signetics encourages the purchase of programming equipment from a manufacturer who has a full line of programming products to offer. Signetics also encourages the manufacturers of PROM programming equipment to submit their equipment for verification of electrical parameters and programming procedures. Information on manufacturers offering equipment certified by Signetics is available upon request from Signetics Memory Marketing.

SIGNETICS DISCOURAGES THE CONSTRUCTION AND USE OF "HOMEMADE" PROGRAMMING EQUIPMENT

In order to consistently achieve excellent programming yields, periodic calibration of the programming equipment is required. Consult the equipment manufacturer for the recommended calibration interval. Signetics

64K-bit CMOS PROM (8K × 8)**27HC641**

warranty for programmability extends only to product that has been programmed on certified equipment that has been serviced to the manufacturer's recommendations.

AC VOLTAGE WAVEFORMS**VOLTAGE WAVEFORMS****DEFINITIONS**

Data Sheet Identification	Product Status	Definition
<i>Objective Specification</i>	Formative or in Design	This data sheet contains the design target or goal specifications for product development. Specifications may change in any manner without notice.
<i>Preliminary Specification</i>	Preproduction Product	This data sheet contains preliminary data, and supplementary data will be published at a later date. Signetics reserves the right to make changes at any time without notice in order to improve design and supply the best possible product.
<i>Product Specification</i>	Full Production	This data sheet contains Final Specifications. Signetics reserves the right to make changes at any time without notice, in order to improve design and supply the best possible product.

Signetics reserves the right to make changes without notice in the products, including circuits, standard cells, and/or software, described or contained herein, in order to improve design and/or performance. Signetics assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Signetics makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

LIFE SUPPORT APPLICATIONS

Signetics Products are not designed for use in life support appliances, devices, or systems where malfunction of a Signetics Product can reasonably be expected to result in a personal injury. Signetics customers using or selling Signetics Products for use in such applications do so at their own risk, and agree to fully indemnify Signetics for any damages resulting from such improper use or sale.
